

Day 5: Tasks

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Item	Value
OS Name	Microsoft Windows 11 Home Single Language
Version	10.0.26200 Build 26200
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	ANANTDOMAIN
System Manufacturer	Dell Inc.
System Model	Inspiron 15 3515
System Type	x64-based PC
System SKU	0AB4
Processor	AMD Ryzen 3 3250U with Radeon Graphics, 2600 Mhz, 2 Core(s), 4 Logical ...

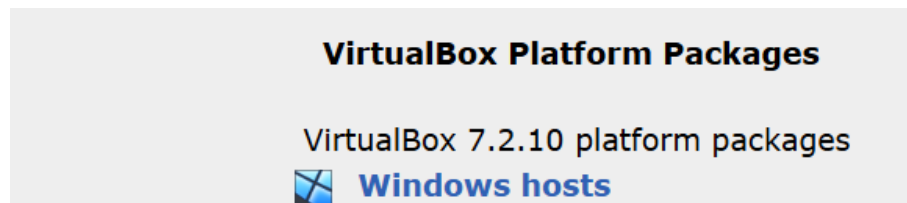

Installed Physical Memory (RAM) 8.00 GB

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.
Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

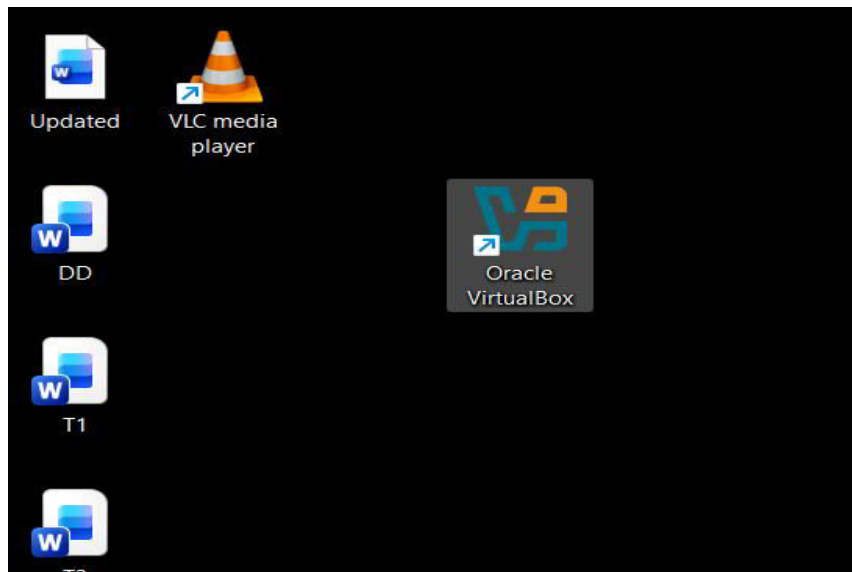

Task: Download Linux ISO and Start Installation Using VirtualBox

1. I downloaded the official Ubuntu Linux ISO file from the Ubuntu website.

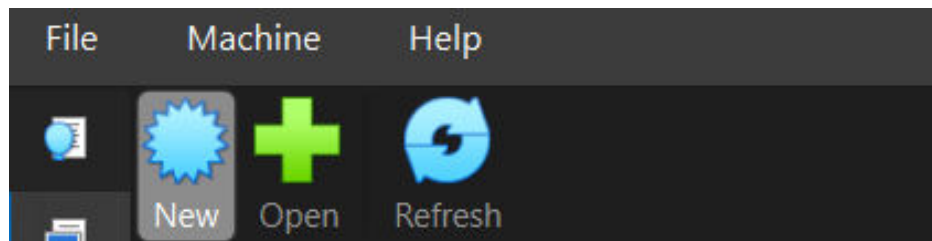

2. Since I did not have a spare USB drive, I used VirtualBox instead of creating a bootable USB.

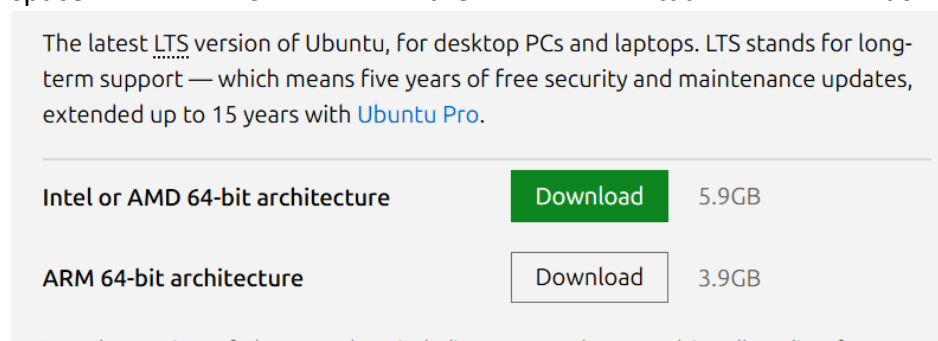

3. I installed VirtualBox on my Windows computer.

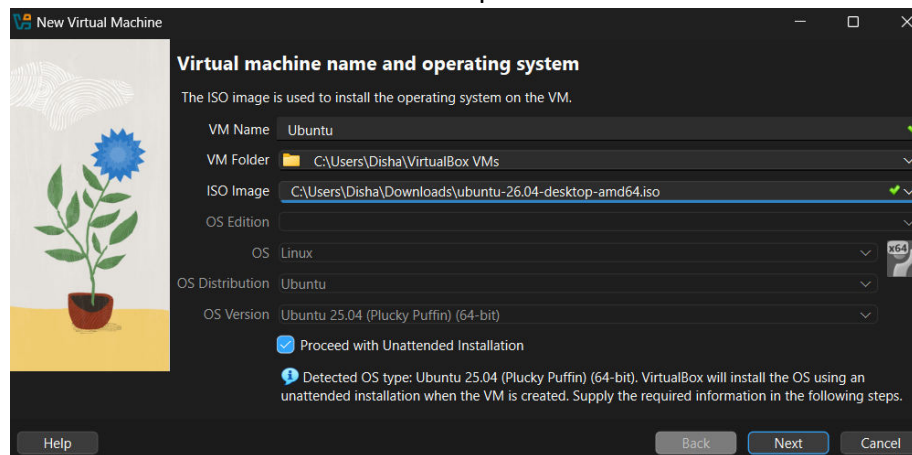

4. I opened VirtualBox and clicked on "New" to create a virtual machine.

5. I selected Linux as the operating system and allocated RAM and storage space for the virtual machine.

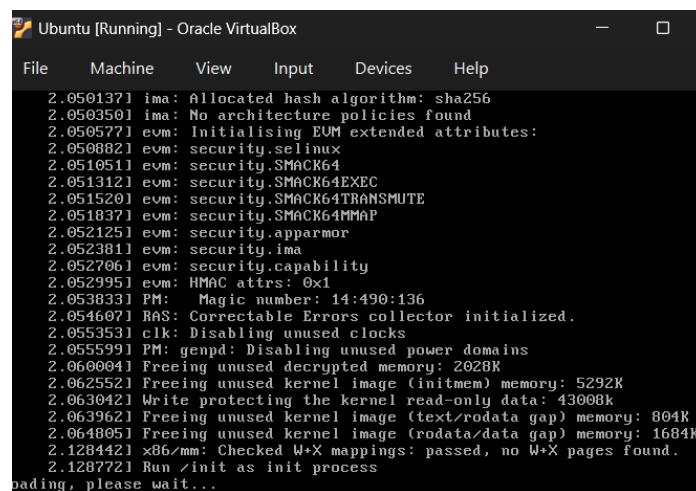

6. I attached the downloaded Ubuntu ISO file to the virtual machine as a virtual optical disk.

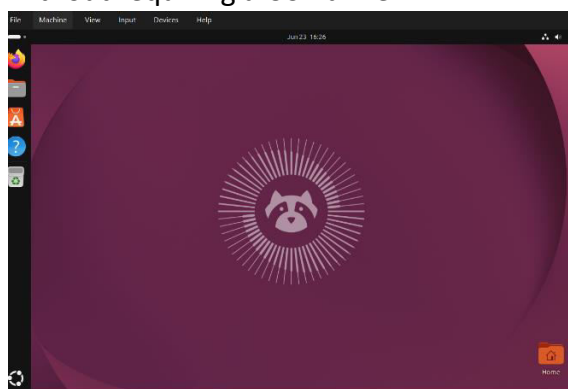

7. I started the virtual machine.

8. The Ubuntu installer booted from the ISO file and the installation process began successfully.

Result:

The Ubuntu Linux installation process was started successfully using VirtualBox without requiring a USB drive.

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

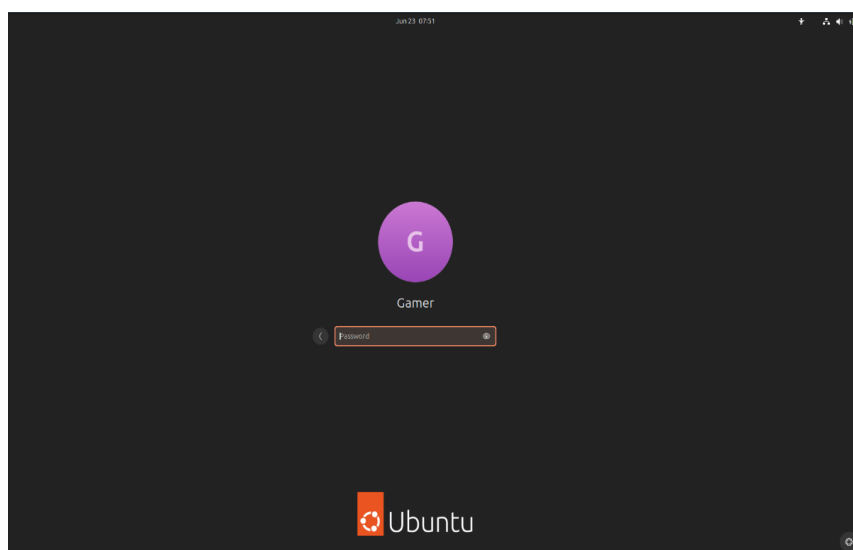

Hint: Find 'Language & Region' in System Preferences to add or change languages.

- **Change the desktop wallpaper and set the system language to Hindi or Gujarati.**

Steps :

1. Opened System Preferences (or System Settings) from the Apple menu.
2. Clicked on Wallpaper/Desktop & Screen Saver.
3. Selected a new wallpaper and applied it successfully.
4. Returned to System Preferences and opened Language & Region.
5. Clicked the + (Add) button under Preferred Languages.
6. Added Hindi (or Gujarati) to the language list.
7. Set the newly added language as the primary system language.
8. Restarted/logged out of the system to apply the language changes.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

- 5. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.**

Windows 10 Installation Using ChatGPT

1. Downloaded Windows 10 ISO.
2. Created a bootable USB using Rufus.
3. Booted the laptop from the USB drive.
4. Started Windows Setup and selected Custom Installation.
5. Created/formatted partitions and selected the installation drive.
6. Completed Windows installation and created a user account.
7. Configured privacy settings and checked for Windows Updates.

Partitioning Tip: Keep a separate partition for personal data.

Post-Installation: Install updates, drivers, and review privacy settings.

Unclear/Missing Steps: More details about partition sizes and driver installation would have been helpful.

Result: Windows 10 installed successfully and basic settings were configured.
