

Day 3: Tasks

1. **List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.**

Issues users can face	Possible Solution
1. Laptop shows "USB Device Not Recognized"	Restart the laptop and reconnect the device.
2. Mouse or keyboard does not work after plugging it in	Remove it and connect it to another USB port
3. Mouse pointer is not moving	Clean the mouse sensor and ensure the surface is suitable for tracking
4. Keyboard or mouse suddenly stops working	Update or reinstall the USB drivers through Device Manager
5. Keyboard types the wrong characters or some keys do not work	Check Num Lock settings and restart the laptop

2. **Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.**

1. **Check if Bluetooth is ON in the phone.**
Open Settings : Bluetooth and make sure Bluetooth is enabled.
2. **Check the headphone battery level.**
Ensure the headphones are charged. A low battery may prevent connection.
3. **Check the LED indicator on the headphones.**
Verify that the Bluetooth light is blinking, which usually means pairing mode is active.
4. **Turn Bluetooth OFF and ON again.**
Disable Bluetooth on the phone, wait a few seconds, and enable it again.
5. **Put the headphones in pairing mode.**
Press and hold the power or pairing button until the indicator light starts flashing.
6. **Search for available Bluetooth devices.**
In the phone's Bluetooth settings, look for the headphone name in the device list.

3. A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem.

Hint: Consider device manager, privacy settings, and app permissions.

1. **Check the USB Connection**

Unplug the webcam and connect it to another USB port. Make sure the cable is properly connected.

2. **Verify the Webcam in Device Manager**

Open Device Manager and check if the webcam appears under Cameras or Imaging Devices. Update or reinstall the driver if needed.

3. **Check Windows Privacy Settings**

Follow this step : Settings > Privacy > Camera and make sure camera access is turned on for the device.

4. **Allow Zoom to Access the Camera**

In the Camera privacy settings, ensure that Zoom has permission to use the webcam.

5. **Select the Correct Camera in Zoom**

Open Zoom settings, go to **Video**, and make sure the correct webcam is selected from the camera list.

6. **Restart the Computer and Zoom**

Close Zoom completely, restart the computer, and then open Zoom again to see if the webcam is detected.

4. You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue, and explain what information the tool provides during the process.

follow this steps in your friend's device

1. Open **Settings** and go to **Update & Security > Troubleshoot**.
2. Click **Additional Troubleshooters** and select **Printer**.
3. Click **Run the Troubleshooter**.
4. Choose the printer that is showing the offline status.
5. Windows will automatically check for common problems such as connection issues, driver problems, print spooler errors, or incorrect printer settings.
6. If a problem is found, the troubleshooter may suggest or automatically apply a fix.
7. After the process is complete, I would test the printer by printing a sample document.

Information provided by the Troubleshooter:

- Whether the printer is properly connected.
- If the printer driver is installed and working correctly.

- Status of the Print Spooler service.
- Any errors found during the scan.
- Recommended fixes or actions taken to resolve the issue.
- A final report showing whether the problem was fixed or if further troubleshooting is needed.
